

Restaurant Billing System (Java)

A console-based restaurant billing system developed using Java.

This project demonstrates the use of core Java concepts and Object-Oriented Programming principles.

Features

- Menu-driven console interface
- Add food items with quantity
- Remove ordered items
- View current order list
- Automatic bill calculation
- GST calculation
- Final receipt generation

Technologies Used

- Java
- Object-Oriented Programming (OOP)
- Console I/O

Project Structure

```
```src/
└── restaurantbillingsystem/
 ├── Main.java
 ├── Menu.java
 ├── MenuItem.java
 ├── OrderItem.java
 └── Bill.java
```

...

### **## How to Run**

1. Clone the repository
2. Open the project in IntelliJ IDEA / Eclipse
3. Run `Main.java`
4. Follow on-screen menu instructions
